Superior Distal Clavicle Plate Surgical Technique [continued]

Figure 8

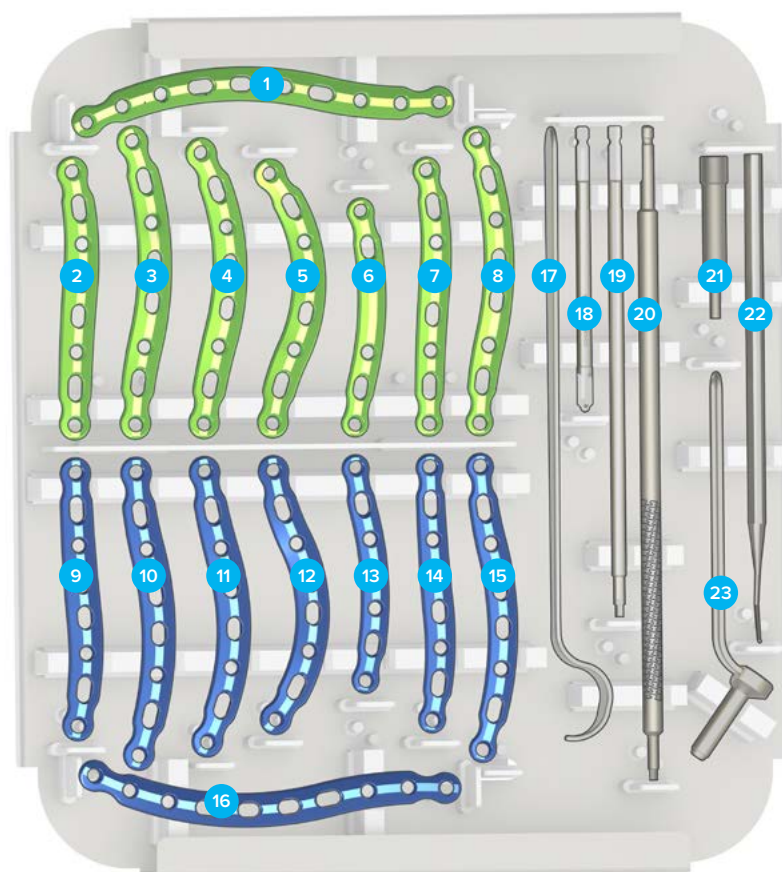

6 Nonlocking Screw Insertion in Distal Portion of Plate

Secure the plate to a distal fragment by inserting a 2.3 mm Nonlocking Cortical (Hex) Screw (CO-N23XX) through the medial-most center hole. Place the 2.0 mm Locking Drill Guide 4 mm–32 mm (80-0249) into the center hole and turn clockwise so that the guide fully threads into the plate. Insert the 2.0 mm Quick Release Drill (80-0318) and advance to the desired depth. Determine drill depth by referencing where the laser mark on the drill aligns with the measurement on the 2.0 mm locking drill guide. Remove the drill guide and use the 1.5 mm Hex Driver Tip (HPC-0015) with the Cruciform Driver Handle (MS-2210) to advance the 2.3 mm nonlocking screw until the screw head fully engages the plate.
